To: The Illumina Hiring Committee

RE: Associate Principal, AI Adoption & Enablement Lead

Dear Members of the Hiring Committee,

I am writing to formally express my interest in the Associate Principal, AI Adoption & Enablement Lead position at Illumina. With over 20 years of experience architecting high-fidelity vision systems and leading global R&D teams at Qualcomm and Samsung, I have a proven track record of moving complex AI models from the lab into mass production—delivering "zero-fault" solutions for over 100 million devices.

Illumina stands at the forefront of the intersection between biology and data science. I am particularly drawn to this role's focus on overseeing the delivery of Generative AI and decision-support capabilities within Operations and Supply Chain. My career has been defined by a similar mission: replacing traditional, heuristic-based systems with robust, neural-driven inspection and perception logic.

During my tenure at Samsung, I pioneered a proprietary ML-based defect analysis system for semiconductor fabrication. By replacing manual inspection with automated training and validation pipelines, we improved detection rates by 20% and saved 40% in production costs. This experience in applying AI to optimize complex manufacturing environments is a direct parallel to the operational enablement goals at Illumina.

At Qualcomm, I spearheaded the transition to Transformer-based architectures on mobile NPUs. This required more than just technical expertise; it required cross-functional leadership to align US innovation hubs with global production centers. As a trilingual leader (English, Korean, Russian) and an IEEE Senior Member, I excel at serving as a "technical bridge"—translating high-level AI research into deployable, metric-driven business results.

I am eager to bring my background in hardware-aware AI, 10 US patents, and large-scale deployment experience to Illumina. I am confident that my "production-hardened" mindset will ensure that Illumina's AI initiatives are not only cutting-edge but also architecturally secure and operationally reliable.

Thank you for your time and consideration. I look forward to the opportunity to discuss how my expertise can support Illumina's mission of improving human health by unlocking the power of the genome.

Sincerely,

Irina Kim
